

New Mover Studies: Decatur County

Sandra Charvat Burke and Mark A. Edelman

Findings

This report highlights the findings and experiences of Decatur County respondents who were included in a survey of nonmetropolitan movers in Iowa.¹ The purpose of the study is to better understand the decisions and thoughts of people who have moved and what they think about the communities and areas where they have lived. With increased understanding about why people move, community leaders may be able to develop actionable strategies for attracting and retaining population.²

Twenty-two respondents from Decatur County participated in the survey, nine who moved into the county, ten who moved out, and three who moved within the county but changed zipcode (Table 1). In many respects, the

Decatur County participants shared similar characteristics and responses with the overall set of respondents, but in some aspects there were differences.

The Decatur movers in the study had a median age profile similar to the overall set of participants across most of the mover groups. There was, however, a higher proportion of movers age 25 - 34 coming into Decatur County than for the overall findings. In addition, all of the Decatur movers were younger than 70 years old, another difference from the overall results (Tables 1, 5; Figure 1).

The respondents coming into Decatur County varied from the overall participants in their educational profile as well. Unlike the total set of movers, all of those moving

into Decatur had at least some college or vocational training and 44 percent reported having an associate degree (Tables 1, 5).

Reasons for moving varied among the respondents, but generally fell into those related to work, family, community, or housing. The respondents coming into Decatur tended to give fewer family-related reasons and more community kinds of reasons as most important than the overall set of movers (Tables 1, 5). In contrast, among those who left Decatur County, 61 percent said that a work-related reason was most important in their decision to move. Forty percent of the participants who moved out of Decatur said they had taken a new job with a new employer; 22 percent of those coming to Decatur County said they had a new job (Table 2).

Community Vitality Center, Iowa State University, Ames, IA

One third of the movers who came to Decatur County said that wanting to be nearer parents, siblings, or other relatives was a factor in their moving decision. None of the respondents coming to Decatur said that moving to be nearer children, to be in a place where it would be easier to find a spouse or partner, or to take care of aging parents was a factor in their decision (Table 2).

The Decatur movers were very similar to those in other counties in that the respondents who came into Decatur County were more likely than those who left to say that wanting a less congested place to live or a simpler pace of life was a factor in their moving decision. Two-thirds of the participants coming to Decatur noted wanting a simpler pace of life (Tables 2, 6; Figure 1). Those moving out were more likely to say they wanted more arts, entertainment, or cultural activities or a more exciting lifestyle than those who came into Decatur County. Many of the movers to Decatur (44.4%) said that wanting to lower their cost for housing was a factor in their move, but even more (55.6%) noted wanting lower taxes as a factor in the decision to move (Table 2, Figure 1).

In general, the movers coming to Decatur found housing relatively easily. More than half said that finding housing was very easy and none said it was very difficult (Table 3; Figure 1). The Decatur movers tended to report lower income than the overall set of respondents. Approximately one-third of those going both into and out of Decatur County said their household income was less than \$20,000 and another 20 percent had income below \$35,000 (Tables 3, 7; Figure 1). Those who left

Table 9. Mover Categories and Type and Direction of Move.	
Category	Type and Direction of Move
A: <i>Within County, Zipcode change</i>	Moved within one of the 19 study counties but changed zip code.
B: <i>Out To Another Iowa County</i>	Moved out of one of the study counties to another county in Iowa.
C: <i>In From Another Iowa County</i>	Moved from another county in Iowa into one of the study counties.
D: <i>Out To Another State</i>	Moved out of one of the study counties to another state.
E: <i>In From Another State</i>	Moved from another state into one of the study counties.

the county were more likely than those moving in to think that their income in their new location would be higher than it was in the previous location. Nearly 67 percent of those leaving the county said that their household income would be higher in the new location than in Decatur County; just 22 percent of the movers coming to Decatur said this (Table 4).

The movers who came into Decatur County were generally satisfied with their new location. Forty-four percent said they were very satisfied and all the others noted they were at least somewhat satisfied (Table 4; Figure 1). In addition, more than half of those who came to the county said that they would definitely do their move to Decatur County over again (Table 4).

The goal of this study is to better understand the experiences of people who have moved. This report focuses on the findings for Decatur County and highlights some of the similarities and differences with the findings for the entire set of 19 counties. Because the number of respondents in any one county is small, the overall findings and trends are likely the best guidelines as community residents and leaders think about possible next steps. The overall objective is to help community leaders better understand household moving trends so they can develop actionable strategies to address the reasons why people come, why people leave,

enhance the qualities that cause people to stay, and thus stabilize or increase their populations.²

The Study

These research results are from a survey of nonmetropolitan movers in 19 selected counties in Iowa that included Decatur County.¹ People who had moved either into or out of these 19 counties were identified through a purchased database and were mailed a survey in the fall of 2005. The survey asked questions about the respondent’s previous location as well as their current location, reasons for moving, satisfaction with multiple factors in their communities, as well as their demographic, social, and economic situation. Five categories of movers are used to examine the results (Table 9). Most respondents had moved during 2003 through 2005 and 737 respondents who met the study criteria replied for an overall response rate of 35 percent. The estimated response rate for Decatur County was 27.5 percent.

Notes

- 1. Previous reports, a description of the study, the counties included, and the survey questionnaire are available on the Community Vitality Center web site at: www.cvcia.org.
- 2. Previous reports contain examples of possible next steps and strategies that community leaders might consider.
